

# Grokzilla (GROLZ) Whitepaper

## 1. Overview

Grokzilla is an ERC-20 token developed on the BNB Smart Chain, focused on community, fun, and decentralization. Through secure and transparent implementation, it aims to promote crypto community engagement using simple and effective tools, combining memetic culture with solid smart contract fundamentals.

## 2. Token Details

- Name: Grokzilla
- Symbol: GROLZ
- Standard: ERC-20 (BNB Smart Chain)
- Decimals: 18
- Total Supply: 5,000,000,000 GROLZ (5 billion tokens)
- Initial Wallet: The deployer (creator) receives 100% of the supply at the time of deployment

## 3. Fee Mechanism

Grokzilla implements a 3% transfer fee, automatically directed to a tax wallet defined at the time of contract creation.

- Fee Purpose: Marketing, liquidity, partnerships, or community growth
- Flexibility: The fee percentage can be adjusted by the owner up to a limit of 10%
- Security: It's not possible to set the tax wallet to the zero address (invalid address)

## 4. Security and Best Practices

- ReentrancyGuard: Implemented to prevent reentrancy attacks, a common vulnerability in smart contracts

# Grokzilla (GROLZ) Whitepaper

- No Mint/Burn Functions: The supply is fixed and cannot be changed after deployment
- No Blacklist or Pausability: The contract was created to be transparent and immutable, ensuring community trust

## 5. Governance

The contract is initially controlled by the deployer, who can:

- Change the tax wallet address
- Adjust the tax percentage (with a 10% cap)
- Renounce ownership (which makes the contract fully decentralized)

Renouncing ownership is final and turns the contract into a self-governed, trustless system.

## 6. Utility and Project Goals

Grokzilla's main pillar is community engagement. It's not just a speculative token, but a cultural memecoin experience that:

- Encourages organic participation
- Promotes the sharing of creative content
- Plans to build a strong decentralized community

## 7. Roadmap

Phase 1

- Token launch
- Verified on BscScan
- First meme campaigns

# Grokzilla (GROLZ) Whitepaper

## Phase 2

- First Web3 partnerships
- Listing applications on CoinMarketCap / CoinGecko
- Launch of Grokzilla NFTs

## Phase 3

- Grokzilla mobile game
- Listings on DEXs and CEXs
- Massive token burn event

## 8. Conclusion

With a clear contract, no hidden functions, and architecture designed for security and transparency, the GROLZ token positions itself as a trustworthy and fun memecoin. The project is community-driven and aims to reward its holders through a simple yet effective strategy.
